From: Paula Davis
Subject: Welcome and First Steps

Hello,

Welcome to Web Code! This is an exciting time for you to come on board, as has several new projects in the pipeline as “Amazing Events”.

The idea is develop from zero the app, but first we need to send us some exercises on javascript to see your abilities in that language

I know I want you on this project, but I'm still working with Amazing Events to clarify just what they'd like us to do for them. I'm meeting with them this week, so we'll have more detail soon You come to us recommended as an HTML/CSS expert, which is great.

While I working with Amazing Events on their project goals, I'd like you to brush up on your JavaScript and get ready to amaze us all!

Thanks,
Paula Paula Davis

Code of the Web

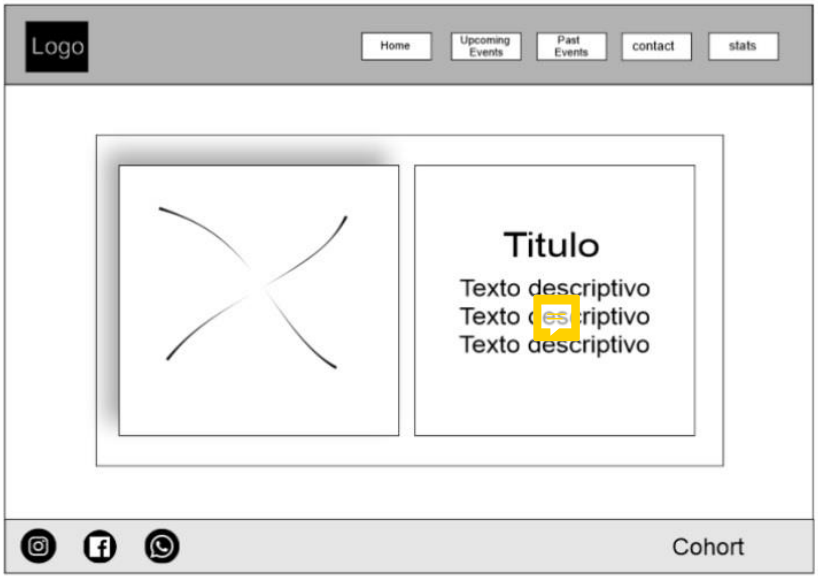
Home

Events

Note that it's one page for Future events and another for Past events with the same design

Contact

Details



Stats

Logo | Home | Upcoming Events | Past Events | contact | stats

< Stats >

Events statistics

Events with the highest percentage of attendance	Events with the lowest percentage of attendance	Event with larger capacity

Upcoming events statistics by category

Categories	Revenues	Percentage of attendance

Past Events statistic by category

Categories	Revenues	Percentage of attendance

Cohort

Data

Every event contains the following data.

- name
- date
- description
- category
- place
- capacity
- assistance or estimate
- price

Delivery

- You must have the 6 HTML (Home, Upcoming Events, Past Events, Contact, Details, Stats) previously presented in mockups.
- Your navBar should be working and you should be able to navigate between different pages.
- Avoid having Validator errors, structure your project folder correctly and define the names of each of the files correctly.
- You can use your own CSS or your preferred library, if you do it with a library, make sure that your project represents you, that is, the components are not identical to those found in the library.
- Incorporates the logo and the favicon in your page.
- Detail in the cards that is found in Home or Upcoming and Past events should be less that we found in Details, that is because this last one complete all event information and the previous ones are summaried or introduction to the event.
- Use the pictures we sent to make the cards of the events.
- Distribute the spaces correctly and keep in mind that this project will be full responsive.

¡SUCCESS...!

MIND HUB.
